

Dynamic Programming Class - 1

Special class

Dynamic Programming

PAST se dikho

jo ek bar calculate kr chuke ho, use dharka calculate krne ki need nahi hai

Top-down

Recursion
+

Memorisation

Bottom Up

tabulation
method

$O(n)$

Space
Optimisation

$O(1)$

When to apply?

Overlapping
Sub problems

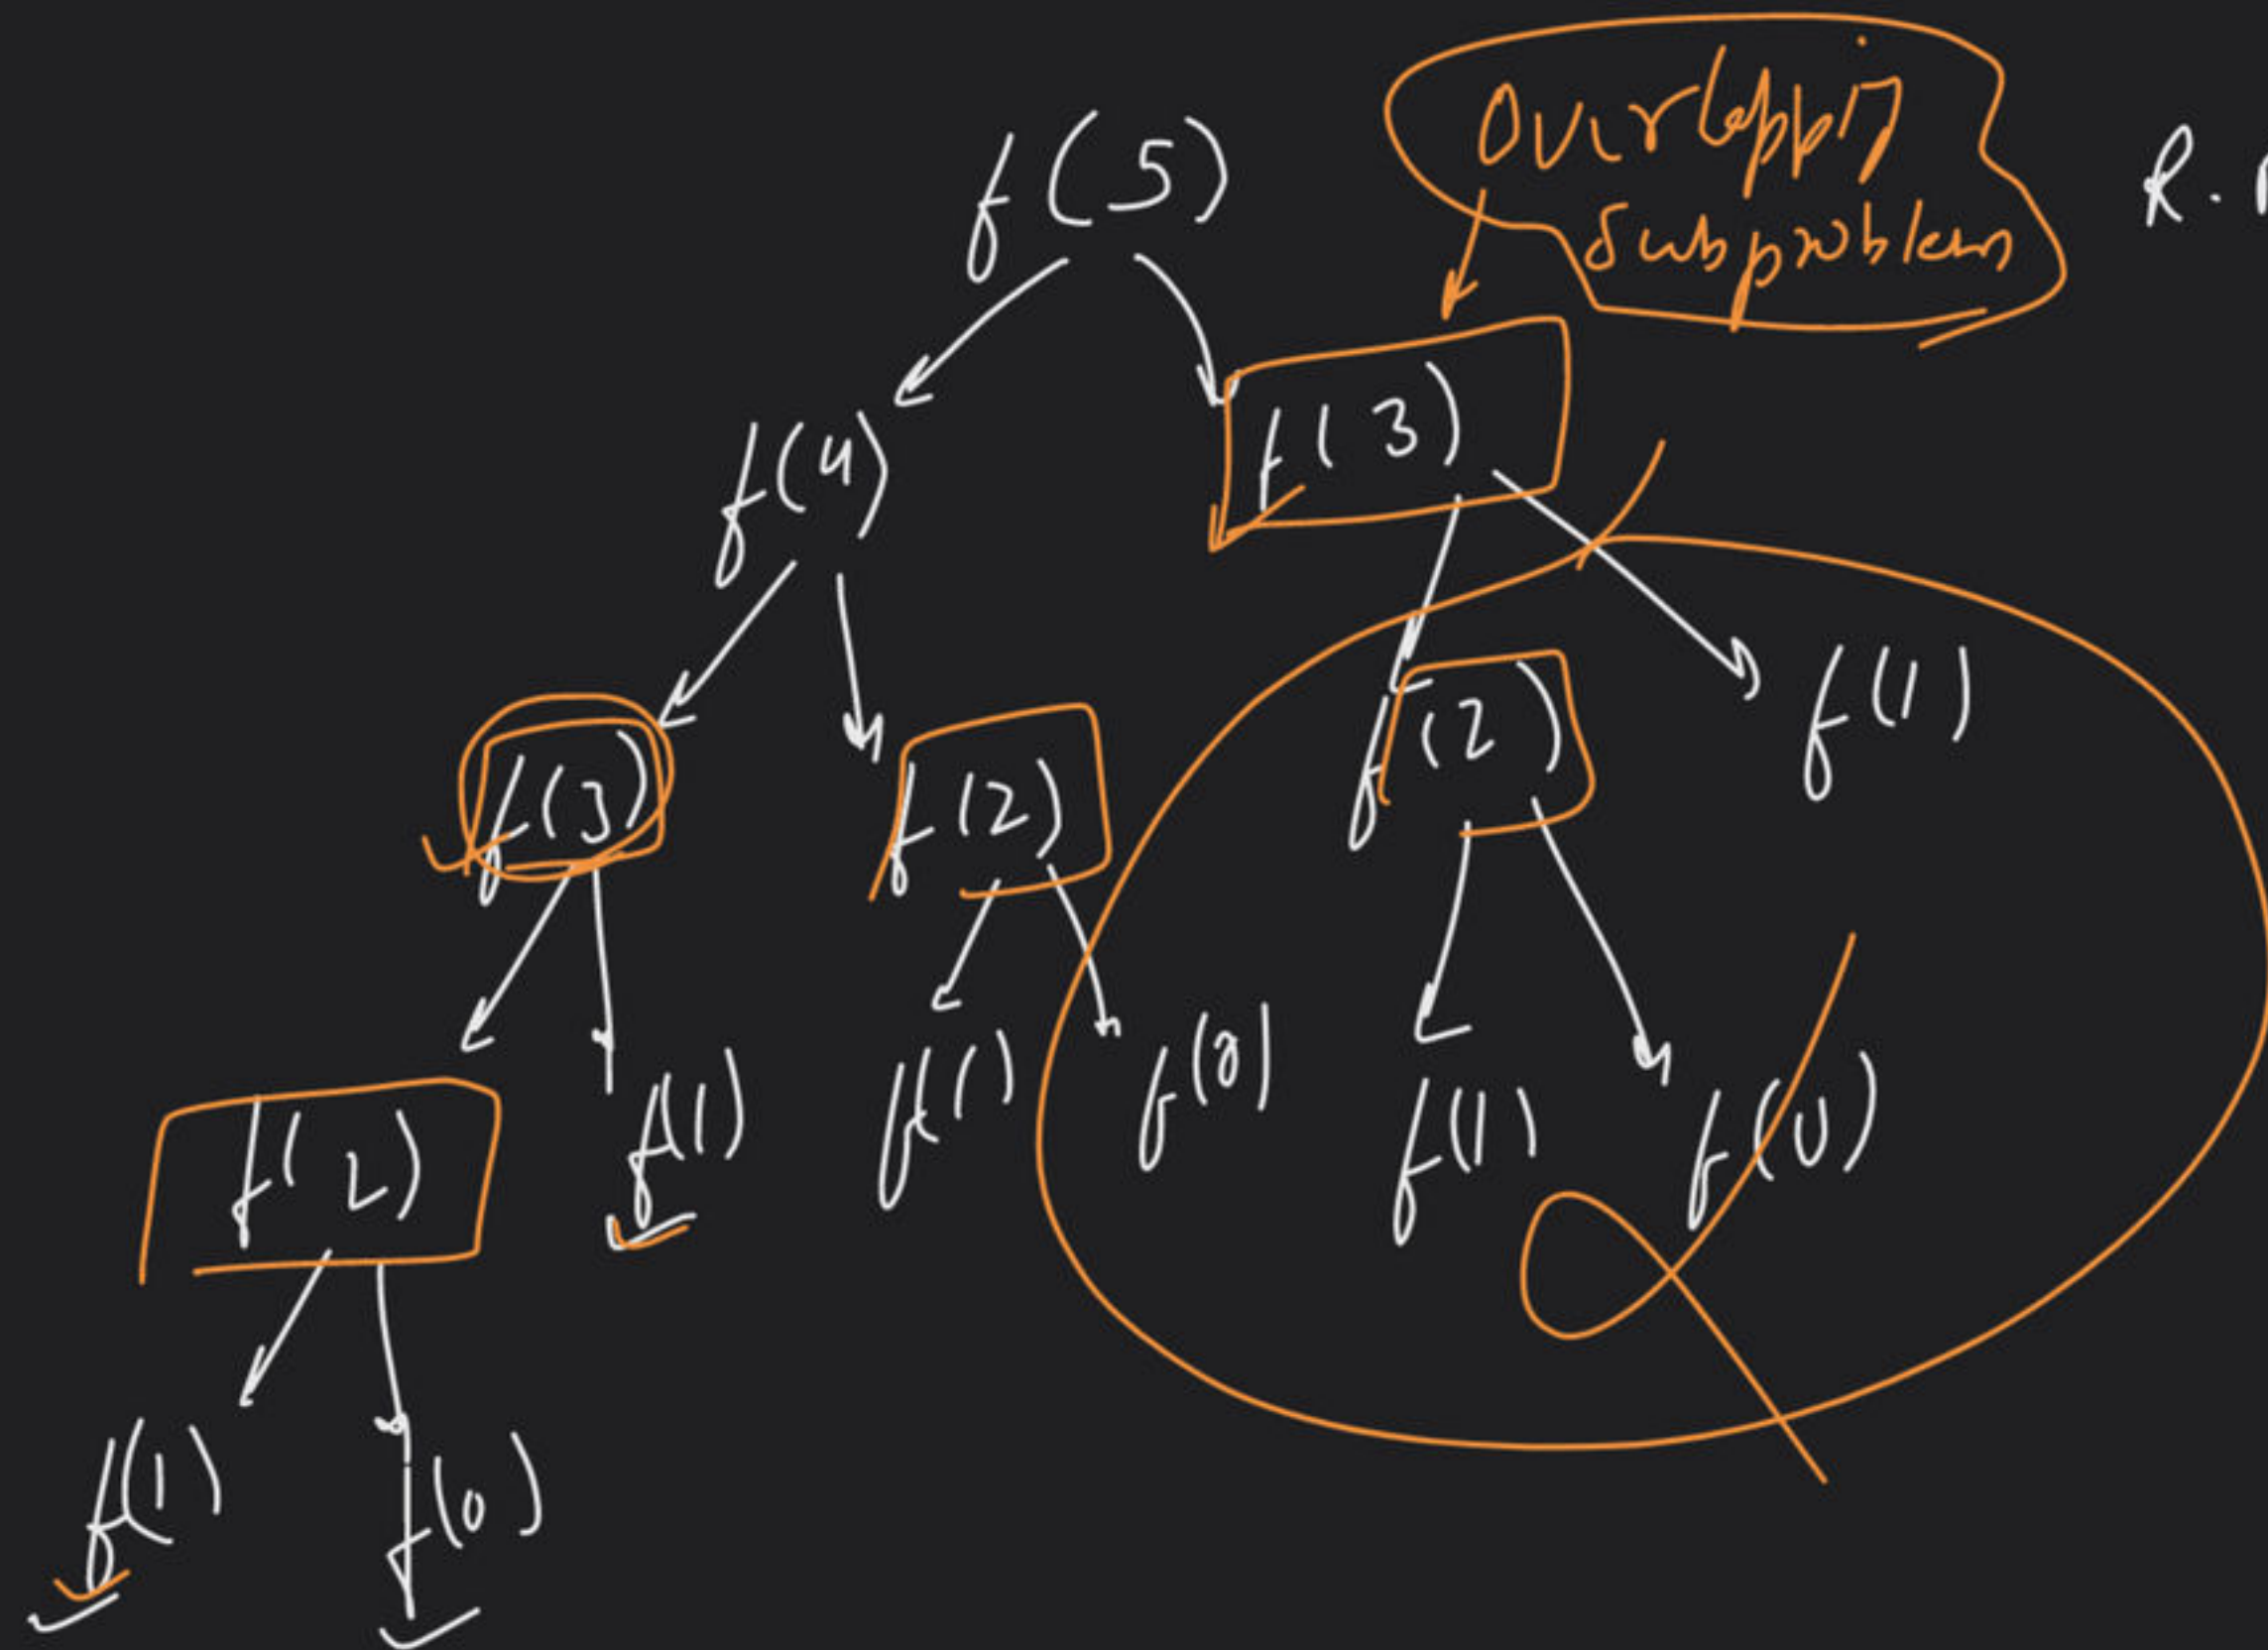

Optimal
Substructure

Same problem
Ko baar baar
solve krne ho

Optimal Solⁿ of
Bigger Problem
can be calculated
using Optimal solⁿ
of smaller
problem

Fibonacci :-

0, 1, 1, 2, 3, 5, 8, 13, 21, ...

R.R \rightarrow

$$f(n) = f(n-1) + f(n-2)$$

Base Case

$f(1) = 1$
 $f(0) = 0$

Rec:-

+ Memoisation

int

{

① Create dp array

vector<int> dp (n+1, -1);

② ans store dp

③ B.C & just base

check if answer already exists

}

0 \rightarrow n

n \rightarrow 0
n+1

fib (int n)

// B.C

if (n == 1 || n == 0)

return n;

if (dp[n] != -1)
return dp[n];

~~dp[n]~~
~~ans~~

fib(n-1) + fib(n-2)

return ~~ans~~;
dp[n]

top Down soln (f, dp)

$f(1) = 1$ $f(0) = 0$

-1	1	-1	1	2	3	5	8
0	1	2	3	4	5	6	

- ① create dp array
- ② store & return
- ③ check is already exist

$$f(2) = 1 + 0 = 1$$

T.D \rightarrow $n \rightarrow 2$

top down

1 0
P
B.C

Bottom-Up [Tabulation method]

if $(k=1) \parallel n=0$
return 0

Step 1 →

Step 2 →

B.C ko
denho

according
value fill
karu

Step 3:
2 → n

return $dp[n]$

for $i=2 : i \leq n$
{
 $dp[i] = dp[i-1] + dp[i-2]$
}

i/p \rightarrow $n = 0$

step 1 \rightarrow dp array \rightarrow 1 size

step

dp[0] = 0

dp[1] = 1

iski
wajah
12 factor
the

Space Optimisation:-

$dp[i]$ $\rightarrow dp[i-1]$
 $\rightarrow dp[i-2]$

Kal lecture

$$f(n) = f(n-1) + f(n-2)$$

$$f(6) = f(5) + f(4)$$

Quality

~~Quantity~~

① Recursive

$n-1 \quad n-2 \quad n-3 \rightarrow 0$

fibonacci

return type
{
fName

ans

$$f(n) = f(n-1) + f(n-2)$$

B.C

ans already exist

operation

Rec Call

dp[n]

return ~~Ans~~ dp[n];

① Memoisation

(I) dp array creat
size
initialise

(II)

ans → store → return → replace dp

(III)

just B.C if (dp[n] != -1) return dp[n]

if $n == 0$ / $n == 1$

① Bottom-Up
Dp

tabulation
method

// step 1 -> create dp array

// step 2 -> top Down/Rec -> B.C. dekh k
aar

add accordingly
in DP array

with time.

// step 3: for -> Kaha N. Kaha tak

confusion

Recall -> replace dp array

$$dp[i] = dp[i-1] + dp[i-2]$$

fill -> logic

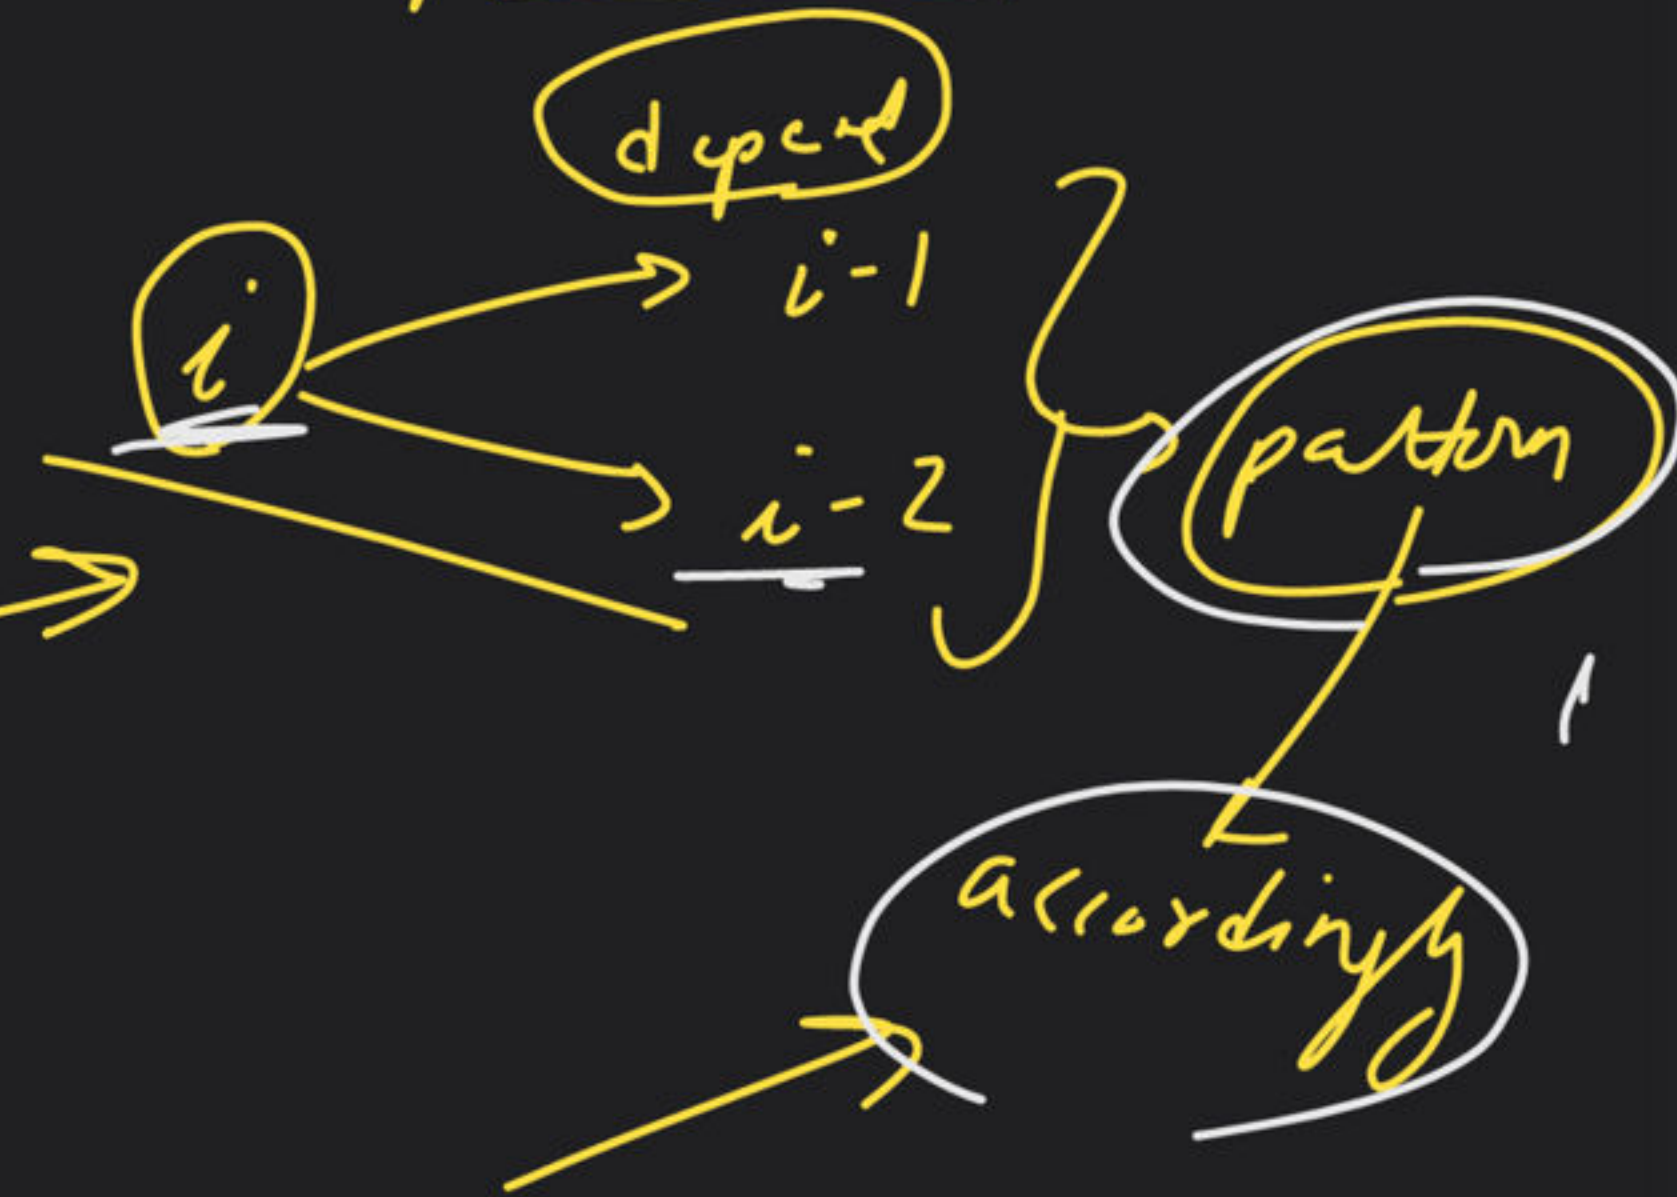

0 1

Space Optimisation:-

Rec \rightarrow T \uparrow S \uparrow

T.D \rightarrow T \downarrow
S \rightarrow Rec std DP array

~~B.V \rightarrow T \downarrow
S \rightarrow DP array~~

S.O \rightarrow
